48 COLLECTION OVERVIEW

50 POP MATERIAL

The inclusion of Kayland in the Novation S.p.A. family of brands, has allowed Kayland to benefit from the myriad of synergies and experience of a company that has always distinguished itself by its culture, strategy, and innovation. In particular, Kayland has benefited from the development experience of established brands Jolly Scarpe and Cosmas relative to footwear for technical rescue and special forces. The R&D department has had the opportunity to apply unique production technologies matched with true manufacturing craftsmanship and an in depth knowledge of the outdoor space to develop footwear that is distinguished in the market for its functional characteristics and technical innovation, allowing mountaineers, backpackers, hikers, and outdoor enthusiasts to continually push their performance limits in maximum comfort.

Kayland con l'ingresso in Novation S.p.A. ha potuto beneficiare di tutte le sinergie di un gruppo che da sempre si distingue per cultura, strategia ed innovazione, a partire dalle esperienze maturate da Jolly Scarpe e da Cosmas nella realizzazione di scarpe per il settore del Rescue e per le truppe speciali. Il reparto R&D ha avuto così la possibilità di applicare tecnologie produttive uniche che abbinate alla cura manifatturiera artigianale ed alla profonda conoscenza del mondo outdoor consentono la realizzazione di calzature che si distinguono sul mercato per caratteristiche tecnico funzionali innovative che permetteranno agli amanti della montagna un continuo miglioramento delle performances nel massimo comfort.

KAYLAND STEPS AHEAD WITH GORE-TEX®

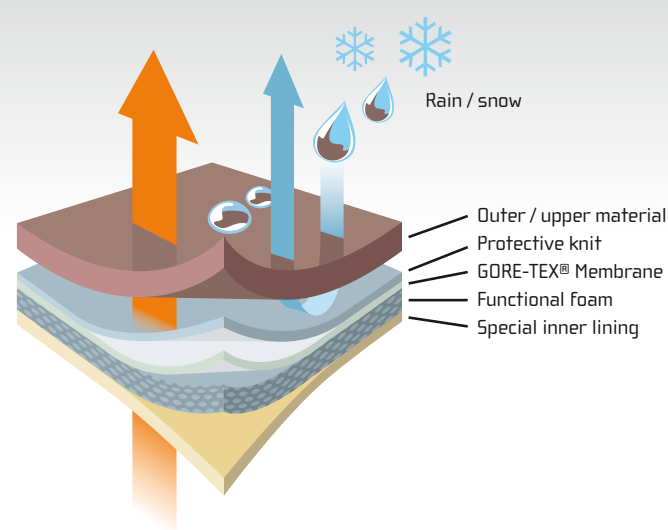

Kayland un passo avanti con Gore-Tex®

Over the past several years, W.L. Gore & Associates and Novation S.p.A. have developed a close partnership. The synergies between the two companies have been further enhanced through W.L. Gore's selection of the Kayland® brand as one of its strategic partners. GORE-TEX® technologies are now used in all of Novation S.p.A.'s footwear brands including Kayland®, Cosmas®, Jolly Scarpe®, and TCX®. The granting of the GORE-TEX® license is another important step ahead for Kayland, representing a reward for many years of hard work in the outdoor industry.

Nel corso degli anni, W.L. Gore & Associati e Novation S.p.A. hanno costruito una stretta collaborazione. Oggi la sinergia fra i due Gruppi segna un ulteriore passo in avanti, grazie alla scelta di W.L. Gore di diventare partner strategico del marchio Kayland®. L'utilizzo della membrana Gore-Tex® ora accomuna tutti i brand del gruppo Novation che include, oltre a Kayland®, Cosmas®, Jolly Scarpe® e Tcx®. Un ulteriore "Step Ahead" per Kayland®, che vede così premiato il lavoro svolto negli anni nel mondo outdoor.

GORE-TEX® Insulated Comfort Footwear Dry & Comfortably warm

Moisture vapour
(Sweat)

GORE-TEX® Insulated Comfort Footwear keeps feet dry, warm and protected by being durably waterproof and breathable and is an engineered system which provides leading climate comfort. It is ideal for cold conditions and winter outdoor activities.

GORE-TEX® Insulated Comfort Footwear:

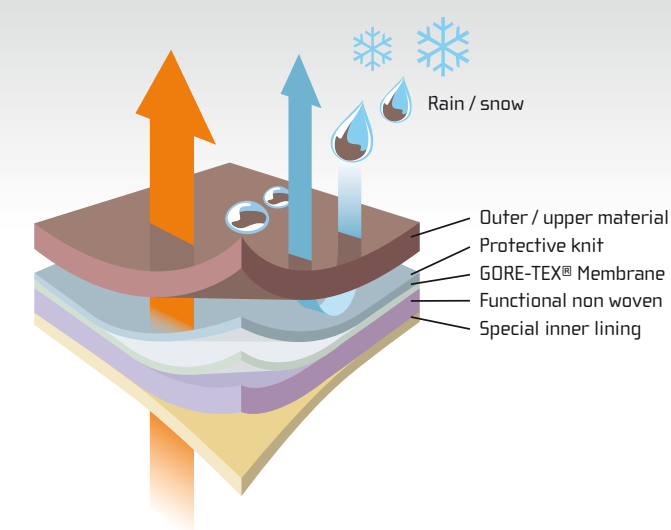

- Durably waterproof and breathable
- Optimized climate comfort
- For cold to very cold conditions
- For a wide range of outdoor activities
- For maximum heat retention

Essendo resistenti all'acqua e traspiranti, le calzature GORE-TEX® Insulated Comfort tengono i piedi asciutti e protetti. Sono basate su un sistema progettato per fornire il massimo comfort climatico. Sono ottimali per condizioni fredde e attività invernali all'aperto.

Caratteristiche principali

- Impermeabili e traspiranti
- Comfort climatico ottimizzato
- Per condizioni fredde e molto fredde
- Per un'ampia gamma di attività all'aperto
- Per la massima ritenzione del calore

GORE-TEX® Performance Comfort Footwear Dry & Comfortable

Moisture vapour
(Sweat)

GORE-TEX® Performance Comfort Footwear keeps feet dry and protected by being durably waterproof and breathable and is an engineered system which provides leading climate comfort. It is ideal for a wide range of conditions and outdoor activities.

GORE-TEX® Performance Comfort Footwear:

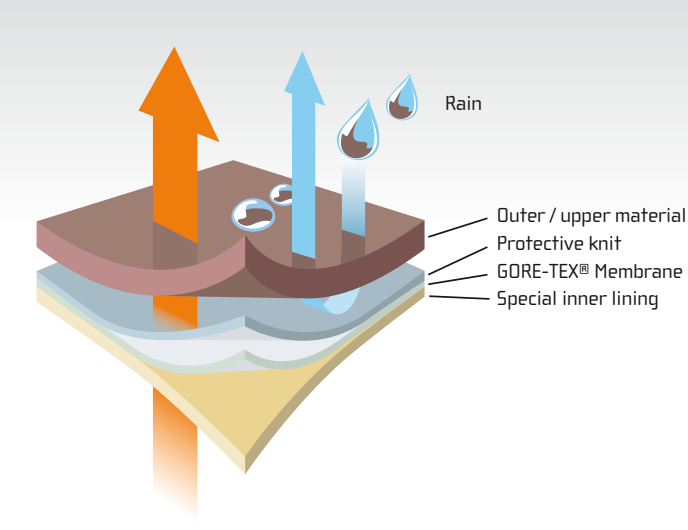

- Durably waterproof and breathable
- Optimized climate comfort
- For moderate conditions
- For a wide range of outdoor activities
- Moderately insulating for nominal heat retention

Essendo resistenti all'acqua e traspiranti, le calzature GORE-TEX® Performance Comfort tengono i piedi asciutti e protetti. Sono basate su un sistema progettato per fornire il massimo comfort climatico. Sono ottimali per un'ampia gamma di condizioni e soprattutto per attività all'aperto.

Caratteristiche principali

- Impermeabili e traspiranti
- Comfort climatico ottimizzato
- Per condizioni climatiche moderate
- Per un'ampia gamma di attività all'aperto
- Moderatamente isolanti per una ritenzione del calore normale

GORE-TEX® Extended Comfort Footwear Dry & Comfortably cool

Moisture vapour
(Sweat)

GORE-TEX® Extended Comfort Footwear keeps feet dry and protected by being durably waterproof and breathable and is an engineered system which provides leading climate comfort. It is ideal for moderate and warmer conditions and during higher activity levels.

GORE-TEX® Extended Comfort Footwear:

- Durably waterproof and breathable
- Optimized climate comfort
- For moderate and warmer conditions
- During higher activity levels
- Non-insulating for lowest heat retention

Essendo resistenti all'acqua e traspiranti, le calzature GORE-TEX® Extended Comfort tengono i piedi asciutti e protetti. Sono basate su un sistema progettato per fornire il massimo comfort climatico. Sono ottimali per condizioni atmosferiche moderate o calde e per attività fisiche intense.

Caratteristiche principali

- Impermeabili a lungo e traspiranti
- Ottimo comfort climatico
- Per condizioni atmosferiche moderate o più calde
- Durante le attività fisiche intense
- Senza strato isolante per una ritenzione termica minima

KAYLAND EXCLUSIVE FIT

Kayland's reputation for superior fit and comfort is well known by athletes, testers, and end consumers alike. The Kayland Exclusive Fit is the result of years of manufacturing experience, continued research & development of materials, ergonomic design, and field testing that have become a true distinctive element of the brand in the outdoor footwear market.

Alle calzature Kayland è riconosciuto da tutti gli atleti, tester e clienti, un superiore livello di FIT e comfort durante la pratica delle diverse attività. Il Kayland Exclusive Fit è proprio il risultato di questa pluriennale esperienza manifatturiera, della continua attività di ricerca del reparto R&D su materiali, ergonomie e test sul campo, che sono diventati un vero e proprio elemento distintivo del marchio nel panorama calzaturiero.

The Kayland Exclusive Fit evolves from research, development, and the combination of the following factors:

Il Kayland Exclusive Fit è dato dalla ricerca, lo studio e la combinazione dei seguenti fattori:

1 LAST AND UPPER Forma e tomaia

The fit of a shoe begins with the form and design of the last. The last is a replica of the human foot, around which the upper is stretched to give the boot its internal shape. Research into design is fundamental because it determines the comfort of the fit and influences the end use of the product. Kayland has been taking feedback from male and female athletes and mountaineers for nearly 40 years to painstakingly develop its range of lasts to ensure an optimal combination of fit and performance for specific uses.

La forma è l'elemento che simula il piede umano durante il processo di produzione, per creare i volumi attorno ai quali viene costruita la tomaia. Lo studio del design è fondamentale perchè determina il comfort della calzata e influisce sul tipo di utilizzo del prodotto. Le numerose opinioni di atleti e alpinisti raccolte da Kayland in oltre 40 anni di attività, sono state utilizzate per sviluppare l'attuale gamma di forme, che sono quindi il risultato della migliore combinazione tra il comfort della calzata e le prestazioni, sia per l'uomo che per la donna.

2 LACING SYSTEM Sistema di allacciatura

Kayland designs and manufactures ergonomic lacing systems, specific for each model, which ensure that the upper wraps the foot optimally. The placement of the laces is designed to allow the upper to flex and bend in accordance with the natural flexing and bending of the foot during walking.

Ankle Lock System

This exclusive system utilizes a free-floating support strap positioned above the ankle, which integrates with the lacing system to anchor the heel in the heelcup and enhance ankle support without inhibiting the natural movement of the joint.

Asymmetrical Lacing System

The Asymmetrical Lacing System encourages the footwear to flex where the foot flexes naturally at the metatarsal-phalangeal joints, and ensures that the upper wraps the foot optimally, providing maximum comfort and sensitivity.

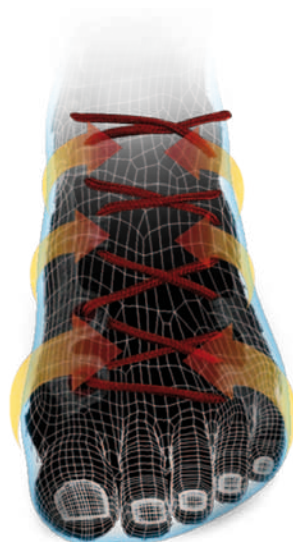

Kayland progetta e realizza sistemi di allacciatura ergonomici dedicati per ogni modello, che garantiscono un'ottimale fasciatura del piede e, al tempo stesso, consentono alla tomaia di avere dei punti di flessione che siano funzionali alla dinamica della camminata.

Ankle Lock System

Questo esclusivo sistema è costituito da una fascia mobile posizionata sopra la caviglia che consente di ancorare il piede e, in sinergia con l'allacciatura, di regolare la chiusura del gambetto, proteggendo l'articolazione senza ostacolarne i movimenti.

Asymmetrical Lacing System

Il sistema di allacciatura asimmetrico consente alla tomaia di avvolgere con la massima precisione ogni singola parte del piede conferendo alla calzatura comfort e sensibilità anche negli utilizzi più estremi.

3 MATERIALS Materiali

The choice of the best materials available in the market is fundamental. With the best leathers and raw materials our craftsmen can create superior footwear.

Fondamentale è la scelta dei migliori materiali presenti sul mercato. La scelta dei migliori pellami e della miglior materia prima fa nascere, sotto sapienti mani, dei capolavori.

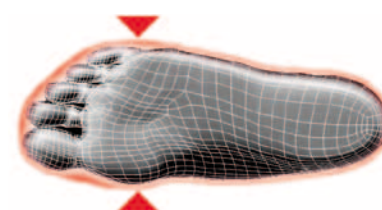

In addition to the subdivision between men's and women's, the Kayland Exclusive Fit can be divided into two distinct categories: Precise Fit and Comfort Fit.

Il Kayland Exclusive Fit, ha consentito di individuare, oltre alla suddivisione fra uomo e donna, due distinte categorie: Precise Fit e Comfort Fit.

precise fit

Form-fitting footwear based on a Derby construction or with an internal boot complete with dedicated lacing system. The upper precisely wraps the foot providing noticeable support.

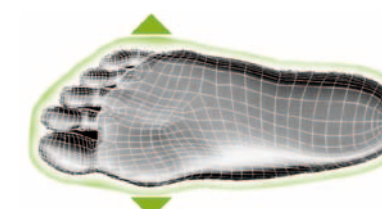

Scarpe asciutte, con costruzioni Derby o a tomaia intera completate con un Lacing System espressamente dedicato. Enfasi nella precisione, nell'avvolgimento e nella sensibilità d'appoggio.

comfort fit

Footwear with a more ample forefoot volume to comfortably accommodate the natural swelling of the feet during long-duration hikes or while carrying pack.

Scarpe con una superficie d'alloggiamento del piede maggiorata, che privilegiano la durata della performance nelle uscite, anche con carichi consistenti nello zaino in spalla.

I.A.D.S. SYSTEM

The I.A.D.S. (Integrated Absorbing Drive System) is a technology designed and developed by Kayland as a cushioning and integrated stabilizing system located in the midsole heel area. The system has been developed for 3 separate footwear applications and end uses:

Lo I.A.D.S. (Integrated Absorbing Drive System) è un sistema studiato e sviluppato da Kayland come tecnologia ammortizzante e stabilizzatrice integrata ed alloggiata nella zona del tallone, dentro la suola. Si sviluppa in 3 diverse applicazioni destinate a calzature dedicate ad usi diversi:

IADS DUAL

A cushioning system with an integrated stabilizer. Specifically developed for the Mountaineering and Backpacking categories, utilizing materials chosen for their ability to maintain the shape and function of the outsole/midsole over time.

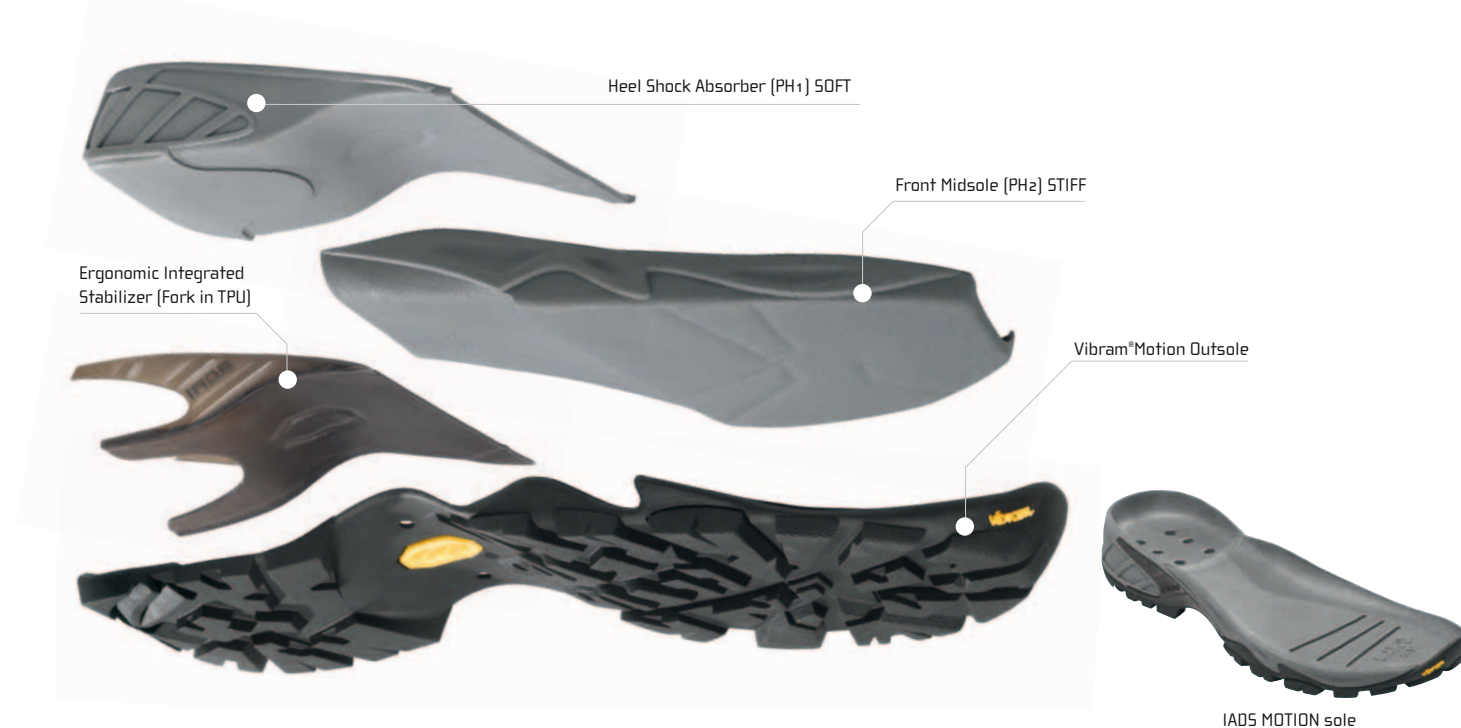

Sistema ammortizzante integrato con funzione di stabilizzatore. Appositamente sviluppato per le linee Mountaineering e Backpacking di Kayland, utilizza materiali dedicati che hanno la caratteristica di mantenimento della forma e della funzionalità della suola nel tempo.

IADS MOTION

A cushioning system with an integrated stabilizer. Specifically developed for Kayland's Hiking and Multiactivity categories, utilizing Phylon in multiple densities, providing lightweight stability and cushioning.

Sistema ammortizzante integrato con funzione di stabilizzatore. Appositamente sviluppato per le linee Hiking e Multiactivity di Kayland. Con l'utilizzo di Phylon a densità variata, che ha la caratteristica di combinare leggerezza e stabilità con funzione ammortizzante.

IADS PRO

The IADS PRO offers optimal shock-absorption, improves stability while walking, and maximizes forward thrust. The molded polyurethane foam midsole with a PU shock-absorber insert in the heel area provides stable cushioning and is suitable to support heavy loads. Research and field testing indicates that the IADS PRO results in noticeable energy savings. Designed for backpacking.

Oltre ad essere un ottimo sistema ammortizzante, migliora la stabilità della camminata e massimizza la spinta in avanti. Il poliuretano espanso in bidensità è specifico per l'utilizzo professionale. È adatto infatti a supportare carichi pesanti e prestazioni impegnative. I test e le ricerche hanno dimostrato che lo I.A.D.S. PRO consente un sensibile risparmio energetico. Per il Backpacking e le prestazioni impegnative.

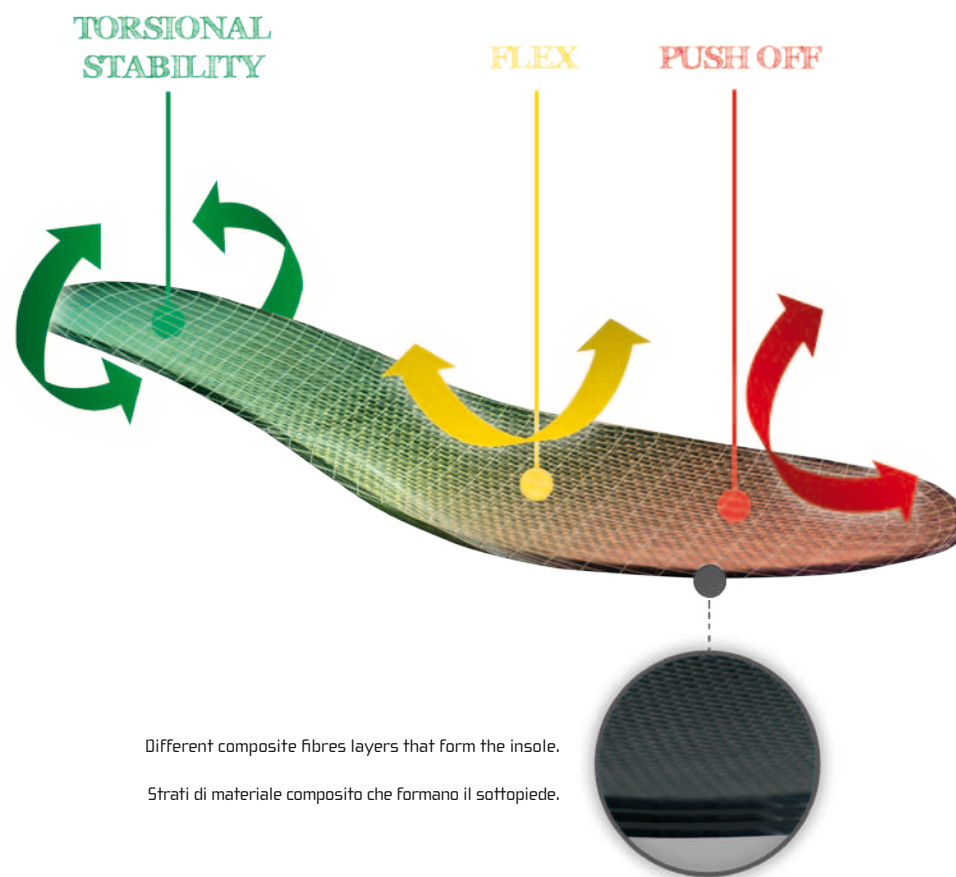

INSOLES

Sottopiedi

Continued research and collaboration with Novation's development department has allowed Kayland's R&D team to create exclusive, composite lasting boards, designated ECT (Engineered Composite Technology), which provide the correct flexibility and stability for the foot. The forefoot zone optimizes push off, while the arch and heel zones enhance overall support and torsional stability.

La continua ricerca e collaborazione con il centro ricerche di Novation ha permesso al reparto R&D di Kayland di mettere a punto degli esclusivi sottopiedi in materiale composito, identificabili dal marchio ECT (Engineered Composite Technology) che forniscono la corretta flessibilità e la buona stabilità del piede. La zona anteriore del metatarso ottimizza la spinta in avanti, mentre il tallone e l'arco plantare aumentano il supporto e la stabilità durante la fase di torsione.

Different composite fibres layers that form the insole.

Strati di materiale composito che formano il sottopiede.

OUTSOLES

Suole

Vibram® Tork

The profile and thickness of the sole have been designed specifically for Backpacking, with multiple tread patterns in various zones providing support, stability, traction and grip. When pushing off while ascending, biomechanically, the foot naturally rotates slightly medially. The Tork Concept, thanks to a radial tread pattern, provides secure grip and helps direct the push off in the direction of travel.

Suola studiata e sviluppata con il Development Center di Vibram in esclusiva per Kayland. Profili e spessori dedicati per il Backpacking, con sculture variate in funzione delle zone di appoggio, stabilità, trazione ed aderenza. Durante la salita, in fase di spinta nella camminata, la biomeccanica della gamba porta il piede a ruotare fisiologicamente e gradualmente verso l'interno. Il Tork Concept, grazie alla disposizione delle sculture a raggiera, consente, in questa fase dell'azione, una costante aderenza, con il beneficio di ottimizzare la spinta nella direzione di marcia.

LEVEL OF RIGIDITY

Livello di rigidità

This indicates the degree of resistance to bending and torsion given by the combination of materials used in the construction of the upper, outsole, midsole, and lasting board.

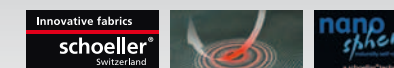

Indica il grado di resistenza alla flessione e alla torsione dato dalla combinazione dei materiali usati nella costruzione della suola e del sottopiede di montaggio.

FABRICS & TECHNOLOGIES

Materiali e tecnologie

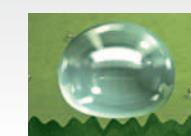

SCHOELLER® TECHNOLOGIES

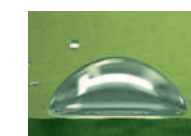

Schoeller® Nanosphere® Technology

Nature shows us how. The leaves of certain plants always stay clean, because dirt cannot adhere to their finely structured surfaces and is easily washed off by rain. This process is permanently transferred to the textile surface by means of nanotechnology. The result is called NanoSphere®.

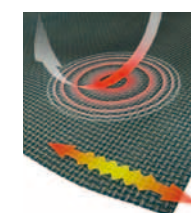

La natura dà l'esempio. Le foglie di alcune piante rimangono sempre pulite in quanto le loro superfici finemente strutturate non consentono alla sporcizia di aderire, lasciando che venga dilavata dalla pioggia con la massima semplicità. Questo processo viene trasferito in modo permanente alla superficie tessile per mezzo della nanotecnologia. Il risultato è: NanoSphere®.

NanoSphere® surface

Conventional fabric surface

Schoeller® Keprotec® Technology

Extremely abrasion and tear resistant fabric with Kevlar® for top quality protection.

Tessuto estremamente resistente all'abrasione e allo strappo con Kevlar® per elevate caratteristiche protettive.

PRIMALOFT® TECHNOLOGY

PrimaLoft® Footwear technology combines ultra-fine and multi-diameter fibres in a specially engineered process that works with the structure of the boot to help keep feet warm and dry. Together the fibres form a torsionally strong and insulating core. Your feet take you to exciting places-and back home again-so foot protection and comfort are of primary importance. PrimaLoft® helps you to conserve energy by keeping your feet warm also in the most extreme conditions.

La tecnologia PrimaLoft® Footwear combina fibre ultra-sottili e multi-diametro in un processo appositamente creato per la struttura degli scarponi, per aiutare a mantenere i piedi caldi e asciutti. Insieme le fibre creano un nucleo isolante e forte in termini di torsione. PrimaLoft® aiuta a conservare l'energia mantenendo i piedi caldi anche nelle situazioni più estreme.

DRYVER® TECHNOLOGY

A highly abrasion-resistant, comfortable and durable lining material with excellent color retention. Absorbs perspiration keeping feet drier. Its antibacterial properties minimize unpleasant odors.

Fodera dall'elevato potere di assorbimento del sudore/umidità. Il trattamento antibatterico impedisce la formazione di funghi e cattivi odori. La resistenza all'abrasione e la solidità del colore garantiscono la durata nel tempo.

Scarpa da light backpacking dal design innovativo ed ergonomico. Leggera ed altamente traspirante, con un'elevata trazione anche su sentieri impegnativi.

Hiking

Hiking technology

Ergonomic Tab

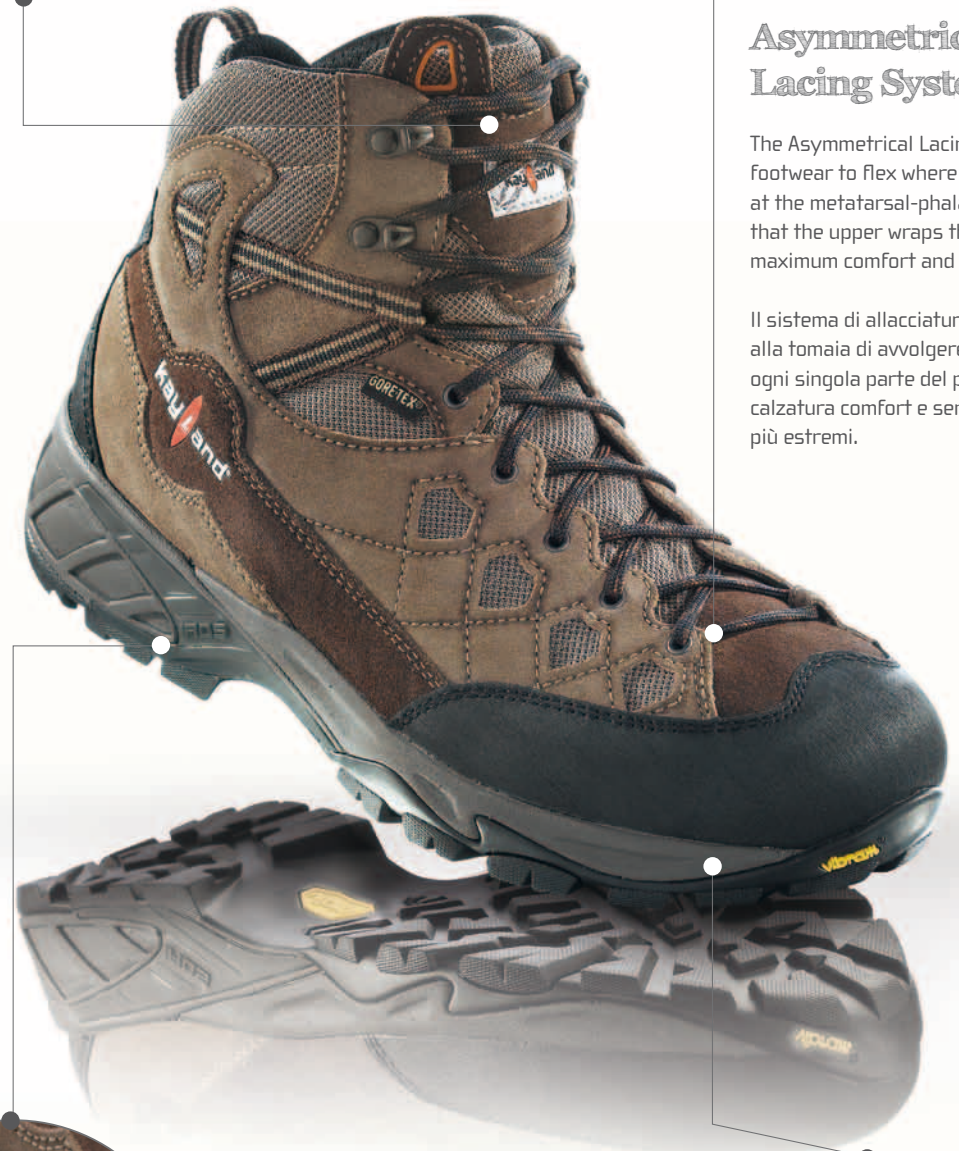

Asymmetrical Lacing System

The Asymmetrical Lacing System encourages the footwear to flex where the foot flexes naturally at the metatarsal-phalangeal joints, and ensures that the upper wraps the foot optimally, providing maximum comfort and sensitivity.

Il sistema di allacciatura asimmetrico consente alla tomaia di avvolgere con la massima precisione ogni singola parte del piede conferendo alla calzatura comfort e sensibilità anche negli utilizzi più estremi.

Multiactivity

Multiactivity technology

Heel Supportive Band

A signature Kayland performance feature consisting of a continuous band of material initiating from the medial arch, wrapping around the Achilles area, and back down to the lateral arch, to form an external heel counter, providing additional stability and support.

Sistema ergonomico di sovra-iniezione a supporto e protezione in pu ultrasensibile sulla tomaia. Questo procedimento conferisce maggiore leggerezza ed un ottimo supporto strutturale.

Protective Rubber Rand

Vibram®
SkyRunning

Extended Asymmetrical Lacing System

The Asymmetrical Lacing System encourages the footwear to flex where the foot flexes naturally at the metatarsal-phalangeal joints, and ensures that the upper wraps the foot optimally, providing maximum comfort and sensitivity.

Extended lacing allows for a precise fit along the full length of the foot down to the toe.

Il sistema di allacciatura asimmetrico consente alla tomaia di avvolgere con la massima precisione ogni singola parte del piede conferendo alla calzatura comfort e sensibilità anche negli utilizzi più estremi. L'allacciatura prolungata permette un fit preciso su tutta la lunghezza del piede, fino alla punta.
